KEY TRAVEL
12 mm, click at 8 mm

ON THE SPRUE

1 Base

2 Top housing

3 Spring frame

4 Stem

5 Click jacket

6 Pin

7 Keycap

BEFORE YOU START

Cut, then trim
Snip at the runner, then trim the stub flush.

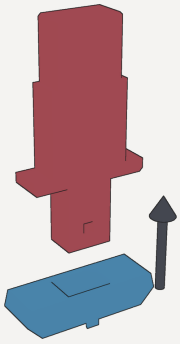

Clean the sliders
Stem (4) and jacket (5) slide: no stubs.

Never force
If a part won't go in, turn it around.

Taking it apart
Squeeze both hooks in, lift the top housing.

ASSEMBLY

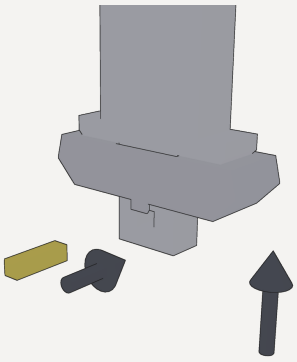

Six steps

1 4 5

Jacket on the stem

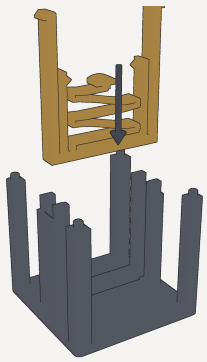

Slide the click jacket up the stem as far as it goes: cut corner to cut corner, long bevel down.

2 6

Fit the pin

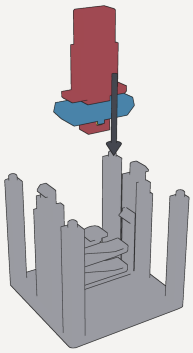

Hold the jacket up. Push the pin through until both ends stick out equally, then let go.

3 3 1

Frame into the base

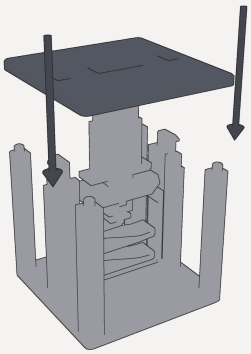

Press the spring frame straight down into the base, hooks up, until the bar sits flat.

4 4

Drop in the stem

Lower the stem between the click arms onto the spring. Keep the base upright from now on.

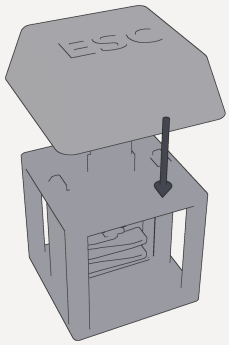

5 2

Close the top

Push the top housing down until both hooks click over its top.

Both hooks like this

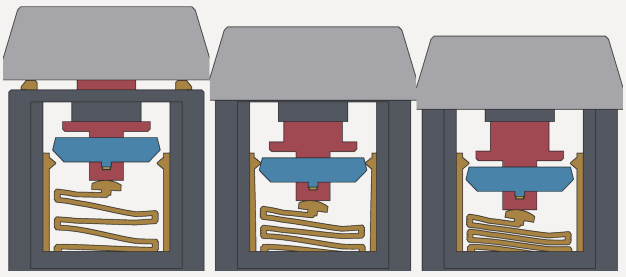

6 7

Fit the keycap

Press the keycap on, ESC facing you, until it stops. Done.

CHECK IT WORKS

Press the key: a firm bump and a sharp click at about 8 mm, then it springs back up.

IF SOMETHING IS OFF

No click
Jacket the right way up? Pin in? Both click arms have their teeth?

Key sticks
Trim the gate stubs on the stem (4) and jacket (5).

Top lifts on one side
Press it down until both hooks click.

Jacket won't sit on the pin
Centre the pin so both ends stick out equally.
